SW

Hi Everyone,

It was great to catch up with Greg and Gina to discuss a plan for getting this project published!

We are going to aim high and submit our manuscript to the European Journal of Human Genetics and see how we go. We had a quick discussion about the order of authors and agreed to me being first author, Greg second, Lisa third and Gina last as the supervising author.

We discussed the need for updating our data to ensure the project stays relevant. We want to have some full text data from other journals (as the Journal of Genetic Counselling will not be necessarily relevant or interesting to the EJHG). During the meeting Greg started investigating if he can acquire full text article pdfs from some genetics journals using chatgpt and other mysterious methods. We will wait to hear from him on the outcome of this, to decide on how we can proceed with attaining more full text analyses.

I am going to rerun “my methods” on an updated catalogue of the journal of genetic counselling to include publications from this year.

Project Additions for Publication

- Greg is going to perform an analysis to determine if title and abstract analysis serves as a suitable proxy for full text analysis
- More in depth Statistical Analysis
- Improve figures
- Update Title

Our Next steps

- Gina is going to create a one drive folder for us to use for the rest of this project (I am going to upload all my data to ensure that we / UTS can access it once I graduate)
- I am going to create a shared word document with the EJHG manuscript layout requirements and begin working on the introduction and methods, as well as set up the document with endnote in the appropriate formatting for EJHG.
- Greg is going to rerun his program on the cross refdatabase to include; Genetics in Medicine, Journal of Medical Genetics, American Journal of Medical Genetics, Human Mutation, Human Genetics and Genomic Advances, Clinical Genetics (Gina I picked these extra journals because they focus on Human Genetics, if you can think of anything we're missing please let me know)
- Greg is going to find out if we can get AI to download articles to perform full text analysis.

Timeline

- I am going to Aberdeen, Scotland in November (flying out on the 10th) for my

clinical placement and won't be back until early January. Our plan is to have a great first draft of the manuscript by this time and aim to submit for publication in January.

- We agreed on monthly meetings, which would include Friday 3rd of October and Friday 7th of November. I will send out zoom invites shortly for 2pm on both days so that it's in the calendar, however if we need to adjust the time/date we can.

I think that's everything we discussed!

I wanted to again thank you all for all your support with this project, I am so excited that we can keep working on it and hopefully get it out into the world! I have learnt so much over the course of this project and am looking forward to seeing where this leads us.

Warm Regards,

Sally
